CLASH OF THE CLAWS

MediDoc

Your family's health, unified.

Smart health document management — built for real families, designed for real emergencies.

Scan · Organize · Access · Stay Safe

Prescriptions

Lab Reports

Emergency QR

Made with **GAMMA**

THE PROBLEM

Medical Document Chaos

Families juggle prescriptions, lab reports, and doctor notes across dozens of scattered locations — with no system when it matters most.

WhatsApp & Paper

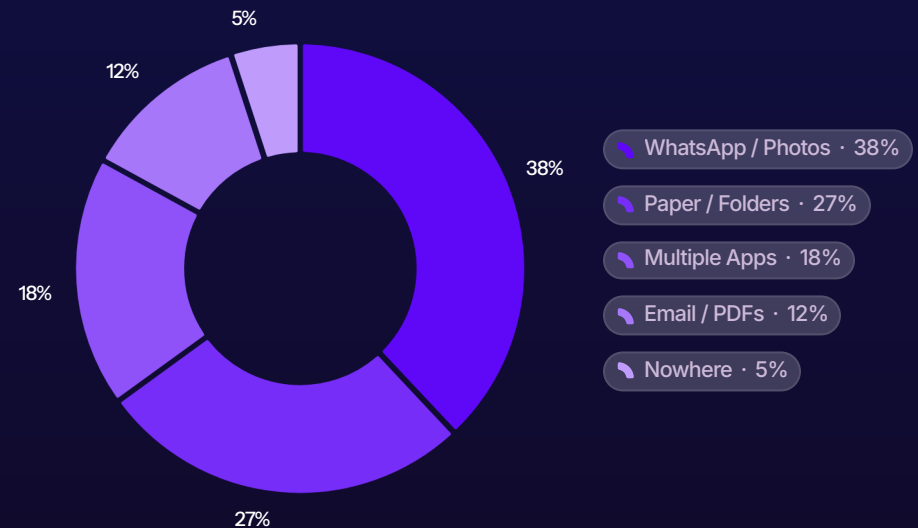

Critical documents buried in chat threads, glove boxes, and kitchen drawers.

Emergency Chaos

No structured access during medical emergencies — minutes lost can cost lives.

Duplicate Tests

Families repeat costly tests because old reports can't be found in time.

73% of families have lost a critical medical document at least once.

Three Layers of Failure

Scattered Documents

Prescriptions on phone camera rolls. Reports on WhatsApp. Doctor notes on paper. **No single source of truth** for a family's complete medical picture.

Zero Emergency Access

In critical moments, families waste precious minutes hunting through apps and drawers. **No instant summary, no structured data** for first responders.

No Intelligence Layer

No smart search across documents. No medication reminders. No health timeline. **Just raw files** with no context or organisation.

 The average family uses **4+ different apps** to manage health documents — with zero interoperability between them.

Introducing MediDoc — Your Smart Health Vault

One secure app that captures, organises, and surfaces your family's entire medical history — instantly.

Scan & Upload

Photo, PDF, or direct upload — any format, any document.

OCR Extraction

It reads and extracts doctor names, medicines, dates, and diagnoses automatically.

Smart Organisation

Auto-tagged timeline of every record, sorted by type, date, and family member.

Instant Search

Ask "show my last blood test" — MediDoc finds it in seconds.

Reminders

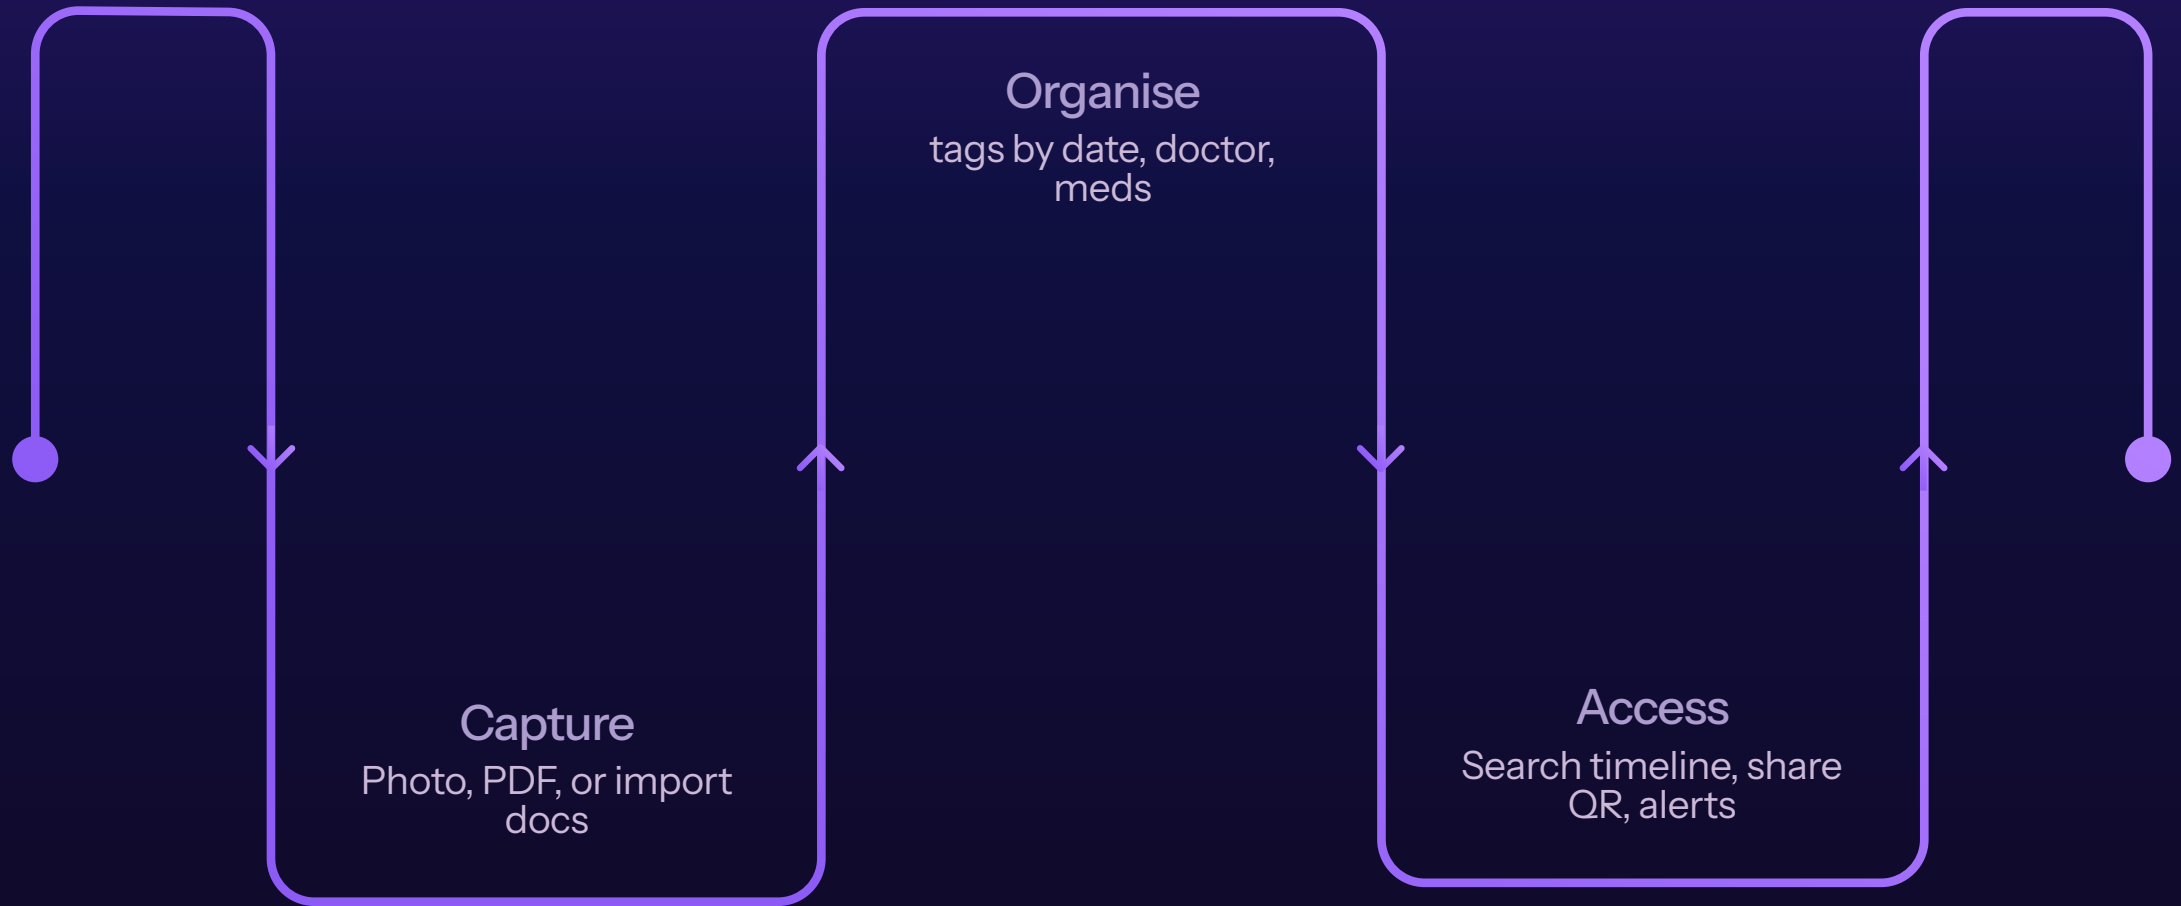

Smart alerts for follow-ups, medication refills, and routine checkups.

Emergency QR

A scannable QR gives doctors instant access to critical health data — no app needed.

Three Simple Steps

Capture

Photo · PDF · Direct upload. Works offline too.

Organise

tagging by date, doctor, medicines & diagnosis. Zero manual effort.

Access

Timeline view · Semantic search · Emergency QR · Smart alerts

☆ KEY FEATURES

Built for Real Life Scenarios

OCR + Extraction

Google Vision API reads prescriptions & reports — extracting structured data automatically.

Family Profiles

Separate health vaults for every family member under one account.

Smart Reminders

Medication refills, follow-up appointments, and vaccination alerts.

Emergency QR Code

Scannable card with blood group, allergies, and current medications — accessible without login.

Privacy & Encryption

AES-256 encryption at rest and in transit. Your health data stays yours.

Offline Access

Critical documents available even without internet — designed for real emergencies.

Technology Stack

Built with production-grade, scalable technologies chosen for speed of development and enterprise reliability.

Frontend — React Native

Cross-platform mobile app for iOS and Android from a single codebase. Fast iteration, native performance.

Backend — Node.js & FastAPI

Node.js handles real-time features; FastAPI powers the OCR microservices with Python's ML ecosystem.

OCR — Google Vision API

Industry-leading optical character recognition with support for handwritten prescriptions and multilingual text.

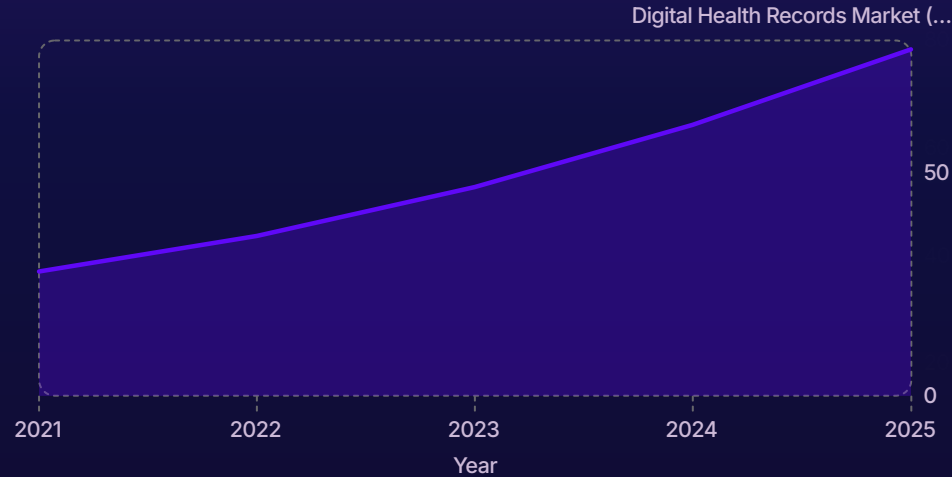

Database — Firebase · Security — AES-256

Firebase Firestore for real-time sync and offline support. All data encrypted with AES-256 at rest and in transit.

MARKET OPPORTUNITY

A Massive, Underserved Market

Digital health records market growing at **~28% CAGR** globally.

300M+

Indian Families

Potential users managing health docs with no structured system.

\$78B

Market Size 2025

Global digital health records industry, expanding rapidly.

40%

Efficiency Gain

Reduction in duplicate diagnostic tests with organised records.

What We're Building at the Hackathon

A focused, fully functional MVP that demonstrates the core value of MediDoc in a real user flow.

01

Scan Prescriptions

Camera capture and PDF import — any document into the vault.

02

OCR Extraction

Google Vision API pulls doctor name, medicines, date, and diagnosis automatically.

03

Timeline View

Chronological health history displayed beautifully per family member.

04

Search Functionality

Semantic search across all documents — find any record in seconds.

05

QR Code Generation

Instant emergency card with critical health data — shareable without login.

All 5 MVP features are **fully scoped and buildable** within the hackathon timeframe using our chosen tech stack.

Timeline

24 hours to working prototype with live OCR and QR demo.

Demo Data

Pre-loaded family profiles showcasing full document lifecycle.

VISION & IMPACT

Because your health history shouldn't be a mystery.

MediDoc is more than a hackathon project — it's a mission to give every family a **unified, intelligent, and safe health record** that works when life depends on it.

- **Reduce Medical Chaos**
One app replaces scattered WhatsApp threads, paper folders, and forgotten PDFs.
- **Faster Emergency Response**
QR code delivers critical health data to first responders in under 10 seconds.
- **Lifelong Digital Health Records**
A complete, searchable, growing health timeline for every family member — forever.
